

CONVERT YOUR FORK TRUCK TO A ROLL HANDLING VEHICLE IN MINUTES

- The patented CAC Roll Handler offers maximum safety in handling rolls – and saves back injuries!
- The CAC Roll Handler features a two point flexible suspension of the roll center lift enabling easy alignment with the roll core.
- Eliminates chance of roll edge damage.
- Obtains true horizontal and vertical positioning of rolls.

12V POWER PACK WITH BUILT IN CHARGER:

A deep cycle battery pack, complete with charger makes conversion of an ordinary fork truck to a roll handling vehicle absolutely simple. Power Pack offers up to 12 hours of continuous use before recharging.

DC ELECTRIC HOIST:

The CAC Fork Truck Roll Handler incorporates a specially selected hoist featuring a heavy duty load brake. It also features a quiet, efficient 3 stage planetary gear train designed for load lifting ideally suited for lifting and turning rolls. Roll turn cycle time is less than 6 seconds.

BASE FRAME:

Rectangular steel tubing, quality controlled weldments, the CAC Base Frame smoothly and easily slides on truck forks. Frame is attractively finished in a beautiful OSHA oriented material handling yellow. (TO LOAD CANTILEVER SHAFTS) order hoist and suspending chain reversed on frame.

CENTER LIFT:

Available in 3" and 6" I.D. core sizes as standard production models. Specifically designed hardened steel grippers, two on each side, engage the core when lifting. The grippers lock in direct proportion to the amount of load they are lifting. It is impossible to disengage when the center lift is carrying weight; an important safety feature. Simply, effortlessly, the case hardened handle is manually raised to withdraw center lift from the core. The CAC Center Lift is finished in a rust proofed black oxide.

"L" ROLL PIVOT ARM::

Heavy duty steel tubing easily rotates rolls from 2 point suspension, and adjusts for varying roll diameters and widths.
